Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       POUNTION: TRYPTASE IS THE MAJOR NEUTRAL PROTESSE PRESENT IN MAST CELLS AND IS SECRETED UPON THE COUPLED ACTIVATION-DEGRANULATION RESPONSE OF THIS CELL TYPE.

CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-, Lys-|-, but with more restricted specificity than trypsin.

SUBUNIT: HOMOTETRAMER.
SUBCELLULAR LOCATION: RELEASED FROM THE SECRETORY GRANULES UPON MAST CELL ACTIVATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SWISS-PROT entry is copyright. CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-, Lys-|-, but with more restricted specificity than trypsin.

SUBUNIT: HOMOTETRAMER (BY SIMILARITY).

SUBCELLULAR LOCATION: RELEASED FROM THE SECRETORY GRANULES UPON MAST CELL ACTIVATION.

ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; are produced by alternative splicing.

SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. TRYPTASE SUBFAMILY.
                                                                                                                                                                                                                                                                                     ween the Swiss Institute of Bioinformatics and the EMBL outstation - European Bioinformatics Institute. FUNCTION: TRYPTASE IS THE MAADOR NEUTRAL PROTEASE PRES
CELLS, AND IS SECRETED UPON THE COUPLED ACTIVATION-DE
RESPONSE OF THIS CELL TYPE.
CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-, Ly
with more restricted specificity than trypsin.
ALTERNATIVE PRODUCTS: 2 isoforms; a long form (shown
                                                                                                                                                                                                                                                                                                                                                                                 DEVELOPMENTAL STAGE: IS NOT EXPRESSED IN MATURE SEROS MUCOSAL MAST CELLS AND IS EXPRESSED ONLY TRANSIENTLY STAGE OF IN VITRO MAST CELL DIFFERENTIATION.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. TRYPTASE
                                                                                                                                                                                                                                                                                                                                                                                                                                              truncated form; are produced by alternative splicing. The alternative splicing event is due to a G to A point mutation the exon 2/intron 2 splice site and causes loss of protein expression. The alternatively spliced transcript is only four
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MOUSE

Purification and characterization."; Eur. J. Biochem. 267:3189-3197(2000).

-i. FUNCTION: TRYPTASE IS THE MAJOR NEUTRAL PROTEASE PRESENT IN MAST CELLS AND IS SECRETED UPON THE COUPLED ACTIVATION-DEGRANULATION RESPONSE OF THIS CELL TYPE.

-i. CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-, Lys-|-, but with more restricted specificity than trypsin.

-i. SUBCURIT: HOMOTETRAMER (By similarity).

-i. SUBCULLUAR LOCATION: RELEASED FROM THE SECRETORY GRANULES UPON
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DISULFID

"Organization and alternative splicing of CACNAlH.";

"Organization and alternative splicing of CACNAlH.";

"Submitted (JAN-2001) to the EMBL/GenBank/DDBJ databases.

-!- SUBCELLULAR LOCATION: MEMBRANE-ANCHORED (Potential).

-!- TISSUE SPECIFICITY: Expressed in many tissues.

-!- POLYMORPHISM: There are two alleles; gamma-I and gamma-II which differ by 5 residues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      hydrophobic extension.";
